

Markdown to Word Converter

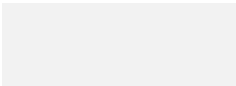

A Java-based command-line tool that converts Markdown files (.md) to Word documents (.docx) with rich text formatting.

The converter preserves the following Markdown elements when converting to Word:

- **Headings** (levels 1-6) with proper Word heading styles
- **Text formatting** (bold, italic, bold-italic combinations)
- **Clickable hyperlinks** with proper URL attributes
- **Lists** (ordered and unordered) including nested lists
- **Code blocks** (fenced and inline) with monospace font
- **Blockquotes** with italic formatting and indentation
- **Images** embedded from local file paths

Prerequisites

- **JDK 17** or higher - Download from Oracle
 - **Maven** 3.6+ - Download from Maven
 - Alternatively, use SDKMAN to install both: ``sdk install java 17.0.12-temp`` and ``sdk install maven``
- Verify installations:

MarkDownToWordSource/

```
#My/Document
main/
This is java statement with emphasis.
